- Portable vacuum instrumentation
- Surface analysis systems
- Process pumps for vacuum devices and deposition chambers
- Pumping, storing and releasing hydrogen isotopes

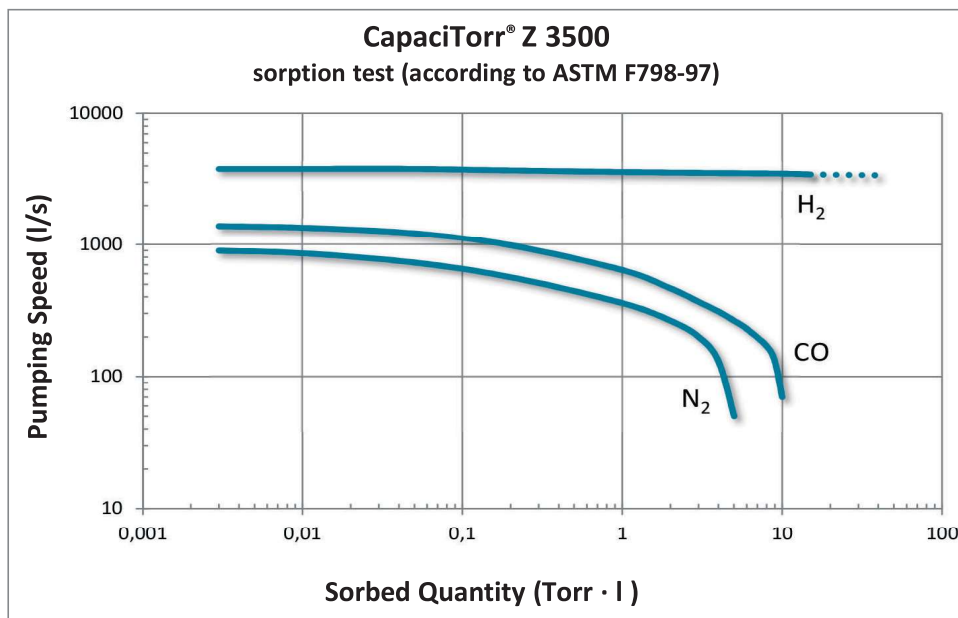

The CapaciTorr® Z 3500 pump is based on high performance SAES® ZAO® sintered porous getter disks. The getter cartridge is provided separately from the CF150 or CF200 base flange, which incorporate a built-in heater that directly connects to the flange power feedthrough.

The pump is equipped with a K-type thermocouple electrically insulated within an alumina tube, for optimal temperature control during conditioning and activation. The CapaciTorr Z 3500 pump offers its best performance when installed directly in the vacuum system using the standard CF 150 or CF200 flange. Alternatively the pump can be installed as an appendage using an optional custom-made pump body.

The ZAO getter material provides superior pumping performance for H₂ than the St-172.
